NOTICE OF ALLOWABILITY

Allowable Subject Matter

1. Claims 1-9 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The closest prior art references are Kondo (JP 2001-168368) and Ishida et al (JP 2001-077391). Both of these references teach a terminal box substantially as claimed, except for the box cover having the claimed double structure. Both references disclose a lid to be used with the terminal box (Kondo at Paragraph 0035; Ishida et al at Paragraphs 0014 and 0034), but neither reference provides any specific teaching as to the structure of this lid. Metallic lids for terminal boxes are known (e.g. Hama et al (JP 2002-111032); Lid 123; Paragraph 0030), but Hama et al provide no particular motivation for the incorporation of metallic lids into the structure of either Kondo or Ishida et al. Kondo provides potential motivation for using a metallic lid, in his teaching of the desirability of enhanced thermal conductivity for radiation of heat from the circuits within the terminal box. (e.g. Paragraph 0047) However, even if this were proper motivation for specifically using a metallic lid, there would be no reasonable motivation for providing an outer cover made of resin, since this would be reasonably expected to reduce the ability of the structure to dissipate heat. The prior art teaches no terminal box cover having the instant double structure. Therefore, the claims are considered to be patentably distinguished from the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
